Subject: FW: PRA from Donald R. Mooney / WNV

Hello Mr. Mooney,

Dr. Kramer voluntarily provided the summary graph below to Kim Glaser of Sacramento at the meeting with Councilmember Fong on July 27, 2007. She did not share a document at the meeting; only the graph. The data in the table below has been shared previously as mentioned in your letter; a full report has not been released and is still in draft format.

Please let me know if you still feel that your Public Records Act request is not satisfied.

Thank you,

Alana McKinzie

Human cases within Sacramento County by date of onset, 2005

blue = treated areas (northern and southern combined), green = untreated area, yellow = buffer zones (northern and southern combined)

All three days of adulticide application are labeled as day 0 and enclosed in the darker vertical bar. The larger darkened bar denotes the range of the human WNV incubation period.

Number of WNV cases in 2005 by location and date of onset

area 2005 total pre- treatment1 post- treatment2 post-incubation3
post- incubation (%)4

northern treated	34	28	6	0	0%
northern buffer	13	9	4	3	23%
southern treated	21	20	1	0	0%
southern buffer	8	5	3	1	13%
untreated	76	41	35	18	24%
Sacramento Co.	152	103	49	22	14%
CA (ex Sac Co.)	670	357	313	197	29%
